

How Local Aussie Software is Helping the Aged Care Industry

Australia's ageing population has significantly increased the demand for high-quality aged care facilities. However, property developers in this sector face ongoing challenges: strict regulations, complex design requirements, and the need to coordinate multiple stakeholders.

Since 2015, UniPhi - a proudly Australian-made, cloud-based Project and Portfolio Management system - has been supporting aged care providers including Anglicare, BUPA, Baptcare, RSL LifeCare, and HammondCare. Before adopting UniPhi, many aged care developers relied on spreadsheets, standalone tools, and manual reporting. This often led to:

- Scattered project data across different platforms
- Time-consuming financial tracking
- Inefficient reporting and approvals
- Limited visibility over budgets, risks, and progress.

The 2018–2021 Royal Commission into Aged Care further highlighted the urgent need for improved compliance and modernised facility delivery. With UniPhi, aged care developers now have a smarter, centralised solution that simplifies project workflows, improves transparency, and drives operational excellence.

"Implementing UniPhi has transformed the way we manage projects and financial reporting. By moving away from outdated manual processes, we now have real-time visibility over critical information, allowing us to make informed decisions based on accurate data," said Katie Formston, Head of Design - Property and Capital Works at HammondCare.

"UniPhi's support team solves problems and reduces the burden of project delivery," said Peter Paltoo, former Executive General Manager at Anglicare.

Mark Heath, CEO of UniPhi, commented, *"We've engineered UniPhi software with the goal of making project delivery simpler, smarter, and more connected. We're proud to partner with organisations that are making a real difference in aged care across Australia, and we are glad to be the trusted software solution of choice."*

UniPhi stands out as a truly unique platform, unlike anything you've used before. Locally developed and proudly Australian, it empowers teams to deliver compliant, high-quality facilities with unmatched control, confidence, and clarity.
