## Joint Replacement Clinic Responds to Cost of Living Crisis with Gap-Free Surgeries

**South Australia** — As headlines across the country focus on the rising costs of medical treatment, the **Joint Replacement Clinic** is reminding Australians that **affordable, high-quality care is not a new idea**—it's something they've been delivering for **over seven years**.

Since its inception, the clinic has offered **Gap-Free joint replacement surgeries** to eligible private patients, helping thousands regain mobility without the burden of out-of-pocket medical costs. In the midst of a deepening **cost of living crisis**, the clinic is reinforcing its commitment to ensuring **no Australian is left behind** when it comes to life-changing orthopaedic care.

“While the rising cost of healthcare is making headlines today, we've been addressing this issue for years,” said **Professor Jegan Krishnan**, Director at the Joint Replacement Clinic. “Our Gap-Free model has already helped thousands of patients get back on their feet—literally—without the financial stress. We believe that access to joint replacement shouldn't depend on your bank balance.”

Australia's first **gap-free program** includes:

- 100% of surgical, anaesthetic, and assistant fees
- Physiotherapy, nursing care, mobility aids
- Concierge service to and from hospital
- Pre-operative and post-operative care
- Access to leading orthopaedic specialists using the latest technologies

To be eligible, patients must hold appropriate hospital cover with a participating private health fund.

In the face of increasing inflation, healthcare affordability is becoming a national conversation. The Joint Replacement Clinic is proud to lead by example, providing accessible surgical options that don't compromise on care or quality.

### About the Joint Replacement Clinic:

The Joint Replacement Clinic is a specialised orthopaedic service offering expert care in hip, knee and shoulder replacement. With a patient-first philosophy, the clinic blends advanced surgical techniques with personalised care to restore mobility and improve quality of life.
