PASG Projects Adopts UniPhi Software as a Next-Level ERP Solution

Specialising in building inspections and remediation, PASG delivers end-to-end project management services for strata managers, owners' committees, and body corporates. With a strong focus on innovation, including 3D imaging and AI-driven assessments, PASG recognised the need for a centralised platform to support operations. They expanded their use of UniPhi software to meet this need.

UniPhi is an award-winning project and portfolio management system developed and engineered in Australia. Designed to replace outdated, disconnected tools developed in the '90s and early 2000s, UniPhi reflects a growing industry shift toward integrated, real-time platforms. The software provides a centralised solution that now operates as a fully integrated enterprise resource planning (ERP) system, streamlining project delivery, financial tracking, and business operations in one place.

Key challenges addressed by UniPhi Software included:

- Dispersed data and manual financial processes
- Inconsistent workflows across projects
- Limited visibility into forecasting and cashflow
- Revenue leakage due to bulk invoicing methods

Over 130 active projects were successfully migrated using UniPhi's copy-paste import method. Financial tracking and forecasting are now fully centralised, and branded, time-based invoices are integrated with Xero, reducing admin effort and improving revenue accuracy.

"*The implementation of UniPhi software has supported positive developments in how we manage our projects*," said **Sunela Samaranayake**, Chief Financial Officer at PASG.
"*It has helped us strengthen accuracy, reduce the risk of revenue loss, and better capture the value of our work.*"

The collaboration highlights the role of Australian software innovation in delivering scalable solutions.
