

FOR IMMEDIATE RELEASE

Commodore Australia to Power Off-Grid Living Festival with Groundbreaking Off—Grid Solar Technology

Shepparton, Victoria, 19/03/2024 – Commodore Australia, a leader in off-grid solar energy solutions, is set to illuminate the Off-Grid Living Festival in Chiltern, Victoria, on April 6 & 7, 2024, with its innovative solar skids, marking a significant shift towards sustainable event power solutions.

In a first-of-its-kind initiative, Commodore Australia announces its collaboration with the Off-Grid Living Festival, Australia's largest event dedicated to sustainable living, to provide clean, efficient power for food vendors and the main stage area using state-of-the-art Transportable Solar Skids. This marks the first time an Australian festival of this scale has embraced a fully renewable power solution, offering a viable alternative to traditional diesel generators.

The use of solar skids by Commodore Australia introduces a new era of energy solutions, capable of supporting not only public events but also providing reliable power in remote and demanding environments such as mining sites and telecommunications infrastructure. *"This initiative is a testament to the adaptability and potential of solar energy to meet diverse energy needs, from community festivals to critical industry operations, paving the way for a more sustainable future."* says Linden Howells, Head of Engineering at Commodore Australia.

The Off-Grid Living Festival attracts thousands of visitors each year, offering workshops, demonstrations, and exhibits on sustainable, self-sufficient and off the grid living practices. *"By powering the festival with our transportable solar skids, we're demonstrating the feasibility and benefits of renewable energy in reducing reliance on fossil fuels"* adds Linden.

Commodore Australia is a leading provider of renewable energy solutions, specialising in residential and commercial off-grid solar power systems. Committed to innovation and sustainability, Commodore is dedicated to empowering Australians with the technology and knowledge to achieve energy independence and sustainable living.
