TELLEC™ launches TELLEC™ Docs, providing revolutionary insight into Microsoft 365 Document Management

[Melbourne, Victoria]: TELLEC™ Solutions Pty Ltd today announced TELLEC™ Docs, a new product uncovering insight into Document Management across the Microsoft 365 platform. TELLEC™ Docs is a first of its kind application that gives an incredible overview of documents and collaboration in Microsoft 365, enhancing the management and security of the platform.

“TELLEC™ Docs gives new insights into how people and departments are using Microsoft 365,” says Joshua Haebets, CEO at TELLEC™. “Compliance oversight in Microsoft 365 has always been a challenge. Now TELLEC™ Docs gives our clients the facts and the data to govern and secure content whilst streamlining storage to save on the ever-growing storage costs.”

For a long time, managers of IT, Records, and Knowledge have struggled to make fully informed decisions about collaboration across Microsoft 365. It has been hard to collate information about outdated and unused content. And it has been difficult to get an understanding of the impact that permissions, site structure, and external sharing are having on users. TELLEC™ Docs provides data and graphics explaining the types of content, who is using it, where they are storing it, and who it is being shared with. It also highlights unused content and unused sharing links. With this information, managers can make evidence-based decisions to maintain and optimise document management in Microsoft 365.

TELLEC™ Docs is a SaaS platform that provides granular details of the ways that SharePoint, MS Teams and OneDrive are being used within an environment. TELLEC™ Docs solves common management issues of costs and compliance by informing storage usage, monitoring and securing permissions and exposing external sharing. TELLEC™ Docs will also unveil end user training needs, which is always a valuable investment to bolster productivity.

In summary, with TELLEC™ Docs;

- Get the real picture of **Storage** at a service level across SharePoint, MS Teams and OneDrive
- True insights into Microsoft 365 **Content** by seeing the types of content used across the environment
- Gain valuable insights into **Usage** with visibility into where users and departments are working
- Finally get a true picture of **External and Internal Sharing** with a clear view of what guests can access

TELLEC™ Docs is currently available as a month-by-month subscription. TELLEC™ will be exhibiting at the upcoming Digital Workplace Conference in Sydney, event information can be found at <https://dwcau.com.au/>. For more information on TELLEC™ Docs visit www.tellec.com.

About TELLEC™: For decades, the team at TELLEC™ have dedicated themselves to helping organisations structure content in meaningful and productive ways. We understand business needs from governance and compliance, to end user challenges. We combine our business understanding with our expertise in Microsoft 365 to help clients achieve much more with their platforms and people.
